

ABSTRACT OF THE DISCLOSURE

The present invention provides novel polynucleotides encoding HGPRBMY14 polypeptides, fragments and homologues thereof. Also provided are vectors, host
5 cells, antibodies, and recombinant and synthetic methods for producing said polypeptides. The invention further relates to diagnostic and therapeutic methods for applying these novel HGPRBMY14 polypeptides to the diagnosis, treatment, and/or prevention of various diseases and/or disorders related to these polypeptides. The invention further relates to screening methods for identifying agonists and antagonists
10 of the polynucleotides and polypeptides of the present invention.
